Campus Buzz, your profile, analytics and referrals

1. What this is

Campus Buzz is the social side of AlgoJob — a feed where students post, follow each other and see achievements. **Analytics** is your personal performance dashboard. **Your public profile** is what other students see. **Referrals** let you share a code with friends.

2. Who can use it

Every candidate.

3. Names and terms

A user might say	Meaning
the feed, buzz, timeline	Campus Buzz
auto post	a post the platform created for you after an achievement
share link	the public link to a single post
radar, spider chart	the skill chart in Analytics
refer, invite	the referral code

4. Campus Buzz

- **Post** text and images to the feed.
- **Like** and **follow** other students.
- **Automatic posts** are created for you on notable achievements — levelling up, and completing an assessment with a strong score. Only scores of **75% or above** generate an automatic post, so a weak result is never broadcast.
- **Share a post publicly.** Each post has a public link that works without signing in, so you can share an achievement outside the platform.

5. Your profile and analytics

Your public profile shows who you are and your achievements. Other students can view it.

Analytics is private to you and covers: - Performance over time across every arena. - A **skill radar** showing your relative strength by skill. - **Heatmaps** of your activity and topic coverage. - Your standing on individual skills.

Report is separate — it holds your per-attempt reports from every product. Analytics is the aggregate view; Report is the per-attempt detail.

6. Referrals

You get a referral code you can share.

⚠️ **Referral rewards are not currently being credited.** The code exists and can be shared, but do not promise a user any reward, XP, credit or discount for referring someone. If a user asks what they get, say the referral programme is not currently active and offer to pass the question to support.

7. When things go wrong

"My achievement was not posted"

Automatic posts are only created for scores of 75% or above, and for level-ups. Below that threshold nothing is posted — deliberately, so a weak attempt is never broadcast.

"I do not want my results posted publicly"

Automatic posts go to Campus Buzz. Delete any post you do not want visible.

"My share link does not work for my friend"

Public post links work without signing in. If the post has been deleted the link stops working.

"My analytics look empty"

Analytics builds from completed, **scored** attempts. An attempt still being scored has not landed yet. Complete at least one attempt in an arena before expecting a chart for it.

"My skill radar does not match my reports"

The radar aggregates across attempts and weights recent performance. A single strong report does not move it immediately.

"I referred a friend and got nothing"

The referral programme is not currently crediting rewards. Apologise for the confusion and route to support.

"I appear on the wrong college leaderboard"

Fix your college in your profile. See `20-accounts-and-login.md`.

8. Common questions

Can I make my profile private? Profile visibility options are not documented — route to support rather than guessing.

Can I delete a post? Yes, your own posts.

Do my practice results get posted automatically? Only strong ones — 75% and above — and level-ups.

Can recruiters see my Campus Buzz posts? Posts are visible on the platform and any post you share with a public link is visible to anyone with the link.

What do I get for referring someone? The referral programme is not currently active. Do not promise a reward.

What is the Blue Tick on the PRO plan? It is listed on the plan card but **is not currently available**. Do not promise it.

Why is my analytics different from my report? Report is per-attempt. Analytics is the aggregate across attempts.

9. What this does not do

- Referral rewards are not currently credited.
- The Blue Tick advertised for Campus Buzz is not available.
- **AlgoBuddy / counselling is not currently available** — the menu item is hidden and it cannot be purchased.
- There is no direct messaging between students.

10. When to contact support

- Anything about referral rewards.
- A post that will not delete.
- Analytics still empty after several completed and scored attempts.
- Requests about profile privacy.
